

A Survey of Teachers of Students with Visual Impairments to Explore Math Class Enrollments Among High School Students with Visual Impairments.

What is the study about?

The researchers are gathering information about the experiences of teachers of students with visual impairments in supporting high school students taking math classes. We are also gathering information about which math classes high school students with visual impairments are taking.

Who are the researchers?

Dr. C. Rett McBride, Assistant Professor of Mathematics, Georgia State University Perimeter College, rettmcbride@gsu.edu.

Dr. Tina Herzberg, Professor, University of South Carolina Upstate, herzberg@uscupstate.edu.

Who is eligible to participate?

The target population is itinerant TVIs practicing in the U.S. or its territories who are supporting at least one high school student taking one or more general education math class in the 2022-2023 school year.

What will participants do?

Participants will complete a brief online survey that includes demographic questions (state or territory, gender, race/ethnicity, years of professional experience, and teaching certifications), questions about the high school students on their caseloads in the 2022-2023 school year (grade level, math class enrollment, media preference), and questions about their experiences in supporting high school students in math. It is expected that most participants will complete the survey in about 20 minutes.

How can I learn more and sign up?

You can contact either of the researchers by email: Dr. McBride (rettmcbride@gsu.edu) or Dr. Herzberg (herzberg@uscupstate.edu).
