

Low Vision Interface for Algebra By Hand

Suppose I'm given this problem. And I have to show that x equals 3. Now, suppose I don't even know where to start. Well, I can always hit this Tell me what to do button.

Huh, it's telling me to add minus 7 to 22. I'm not really sure what to do. Maybe I can tell it to Show me what to do.

Ah ha, it wants me to drag the 7 to the 22. I can do that. I just click on the 7 and drag it to the 22.

Now, I see that $5x$ is equal to 15. Well, now, I know I want to divide by 5. So I'm just going to drag the 5 over to the 15. And I have the correct answer.
